The President said in line with the framework of rapid approach of the results, government efforts strive to revise societies and other legislation that hinder the ease of doing business in Zimbabwe. " recalls that insufficient procurement practices are slowing down economic growth in the country. Impleted Zimbabweans to continue safeguarding prevalent peace and promoting the unit and spirit of hard work, a virtue that the citizens of this country They are known for. Tied to this, it is the fact that Zimbabwe production for labor unit is very low compared to its comparator countries, implies that the average average productivity is very low. President Mugabe said that Total economic performance were slowed in agriculture, mining, tourism, construction and telecommunications. From the same token, Zimbabwe ranked in the lower part 3 in terms of hitch assumptions and practices, flexibility of wage determination and remuneration indicators and productivity. " reiterates that the government recognizes the importance of strengthening feedback with the international community. The president spoke about the need to restore and build trust and stability in the financial services sector as well as needed to encourage private sector investments. This means that, as we move to modify the laws at work we must also take into account the productivity issues in the agricultural sector set out in the Sona. In this regard, it is our expectation that once finalized the national diaspora policy, it should spur our people in the diaspora to exploit the numerous investment opportunities existing in the economy. " said President Mugabe. In 2014-15 Report, Zimbabwe has been ranked 124 out of 144 countries. The plan would be concentrated on the development of the infrastructure, in particular in the key sectors of energy, water, transport and tic, unlocking the potential of small and medium -sized enterprises, encouraging the investments of the private sector and e and build trust and establish in the financial services sector. The current unity of Seeds Services which is a unit in a division of a department in the Ministry of Agriculture was founded around 1950 with capacity to repair only five seed societies. A case in point is the Private Limited Capri which gets components for its refrigerators from SMEs! This can be applied and expanded in the agricultural sector even if it is not well encouraged. The president said another strategy would be the reformulation of parastatal and state companies to record sustained growth. " This saw key government signature projects with China covering energy, roads, railways and telecommunications, water, agriculture, mining and tourism." He said to maintain economic growth and create a job, The government had drawn a 10-point plan to revitalize agriculture and agro-elaboration value chain, early charity and addition of value to agricultural and mining resources, among other facets. Consequently, performance in the agricultural sector will be below the expectation. " he said. " In this sense, the government has now undertaken a parastic reform program that has a priority 10 strategic state companies with urgent attention. Instead, he said, the government would lead to" a legislative and regulatory framework " Regulatory framework " To establish an investment center one that stops simplified processes and procedures. In this regard, we must take into account three factors. However, this is equipped with side effects such as the oligopolistic structure of the seed market that will involve the exploitation of customers. However, the supply of electricity, the overall quality of infrastructures and the seats of the limited airline are perceived as a problem in Zimbabwe. These They have both strong financial muscle and technological progress that the rat does not have! Third, provision of markets " This was like cancer in bone bone marrow For the agricultural sector. In our case, we have observed a situation in which the rat (seed services) is monitoring elephants (sedeco, tobacco search panel, Pananar, seeds agric). As a result, the farmer cannot return to agriculture. Although the act of work has been signed in law, there are serious concerns from the business sector related to the supply carried out in the new law at work. However, it has lower productivity due to climate change, limited resources and lack of corporate ethics from our resettled farmers. The Council would also act as a government consultant on public procurement policy. Secondly, it is necessary to strengthen our institutions in the agricultural value chain. In the same vein, we must work on the creation of corporate connections in particular in the agricultural value chain. Stresses the importance we agree agriculture, the parastat reform program is starting with the grain of the marketing council and the cold storage. The president who remained calm despite failed attempts by opposing Mps to Hackle during him, greeted Zimbabweans to maintain peace and stability, for a key enabler to economic development. For beginners, it is an open secret that farmers are still due to money from the Grano Marketing Board (GMB) for the harvest they delivered last year! Technically, farmers lost their harvest. We need to look as we can encourage companies to follow the companies involved in farmers' patterns like Delta, Seedco, Pananar, Pioneer, Irvines, Nestly, etc. " In any case, specialized audits must be undertaken and varied reforms and revolving options identified. He said the amendments were destined to guarantee a win-win situation. It is obviously as good as we are looking for investments. On this, it is my humble presentation that the Ministry of Finance must do justice with our local farmers in the same way they do with farmers in Zambia, Malawi and South Africa " No! " us Which are both well paid and of all the time. It is important to note that Sona has arrived at an appropriate time when the country is threatened by a series of constraints that inter-alia include the lack of access to finance, the uncertainty of policies, bad infrastructures, inefficient bureaucracy, corruption and restrictive work regulations. To strengthen the facts, the productivity of the Zimbabwe, which is output for average units about \$ 2,000 in monetary terms, while other countries such as Zambia, South Africa, Botswana and Mauritius have an average of about \$ 4,000, \$ 11,000, respectively \$ 14,000 respectively and \$ 22,000 President Mugabe added that the SPB would have been transformed into a new non -executive supply authority in charge of setting rules and guidelines as a compliance monitoring by the supply entities. It is now a very urgent and high-priority question for which these managers will be taken to take into account. " willing, the current re-commitment efforts with bilateral partners e Multilateral, including the African development bank, the Afro-Asian Bank and the World Bank under various initiatives, should see the improvement of relationships and the opening of new financial roads, for long expired reforms and development cooperation. In Consideration of Cié, a new supply invoice will be drawn up and presented in Parliament by the end of 2015. " The procurant bodies will include government ministries, parastatal, state companies and local authorities", he said. The president said enormous wages and other benefits that the advice and gestations of parastatal and state enterprises have granted their avidits to the expense of delivery. My humble presentation is that to renew agricultural production we must put resources to support agriculture now and also encourage Companies engaged in agriculture contract and other value chain support initiatives such as company connections. The government also provides to promote joint ventures and public public Partnership to increase the role and services of state companies, modernizing the laws at work, pursuing the anti -corruption thrust and implementation of special economic areas to attract investments. The general classification of the efficiency of the Zimbabwe Labor Market was 137 out of 144 countries in the GCR 2014-15. "Zimbabwe is already positioning itself for an important economic take-off in line with Zim-Asat, which requires huge capital injection and rapid implementation," said President Mugabe. "It is very clear that, for many years and, due to a series of reasons, the level of compliance with good principles of corporate government in many, if not most of our parastal or state enterprises, has fallen to levels well below what could also be considered as "minimally acceptable", said President Mugabe. To date, we now have more than 45 seed companies, more than 2,000 seed merchants across the country, widening The base of the seed farmers - new players introduced through the agricultural reform program and the number of balloons of varieties recorded. Here we can take lessons from the work done by the Ministry of Industry and Commerce together with the Ministry of Small and Medium -sized enterprises and the Cooperative Development - The two ministries are created a platform to receive a platform to provide subcomponents for large companies. If added, the total costs of downsizing in the Zimbab We are 82.3 weeks of wages (slightly more than a year and a half), which is the highest in the region and almost 9 times the 9.3 weeks of wages in South Africa.) Cié that it is important to note it is That the main source of work in the country is agriculture. " I order to support the positive economic gains recorded to date, the government implemented politicians who will improve the company environment and And they will attract both internal and foreign investments. President Mugabe has recently given the state of the nation (Sona) to which the ten indicators posed: revitalizing the agricultural chain and the chain of the agro-processing value; Advancing the charity and / or adding the value of the equipment of agricultural and mineral resources; Development of support infrastructures in key sectors such as energy, water, transport and information communication technologies (ICT); Unlocking potential of small and medium-sized enterprises (SMEs); Encourage private sector investments; Restoration and construction of trust and established in the financial services sector; Promote joint ventures and public public partnerships (PPP) to increase the role and performance of state property societies; Modernizing laws at work; Pursuing an anti-corruption boost; and implementation of special economic zones to provide impetus for foreign direct investments. First, investments in input support schemes for this 2015-2016 agricultural season. " In the integral, however, and as an important parallel process, the government has also transformed reflectors on corporate governance throughout the public sector, even in all parastatals and state-owned companies and local authorities. More Problems we deal with, will include the intelligent import of genetically modified organisms (GMOS). The head of the state and the government and commander of the head of the ZDF, said following the judgment of the Supreme Court, last month he saw thousands of dismissed workers, the government immediately re-examined the work of work to protect workers via common right. " without the 2014/2015 season, crop production has been negatively affected by a combination of the late Onset of rains and irregular distribution, both consequences of climate change. The Bill incorporates guidelines for the procurement that emphasizes the Of the power to win the offers to get entities. As regards the rigidity of the labor market, the president was a place on which we must modernize work laws. These two problems are positively positively According to the World Bank, the notice period an employer must provide Zimbabwe equal to 13 weeks, which is about three times as long as there is that it is required in neighboring countries. President Mugabe The President of the Chronicle Mugabe Features that the Zimbabwe Desk Zimbabwe Economy is ready for take-off, with various mechanisms put in place to ensure the success of Zim-Sasset.á ,delivers his address to the state of the joint A joint of the National Assembly and Senate of Harare recently, the president said that the government had adopted a 10 -point plan that reduces to all economic anablers. Recently, Agricultural Marketing Authority (AMA) BOSS Basil Nyabadza Bemoaned Rampant acquisition of society of local seeds that include Seedco, Pioneer, Semi Agric and Panric. In the same way, the payment of the treatment that the employers of the Zimbabwean are on average equal to 69.2 weeks of wages, which is also almost three times higher than the average of the neighboring country of 25.4 weeks. " the economic growth rate, initially projected to 3.2%, is now expected to record the growth of 1.5% in 2015, this was mainly occurred by the negative impact of the sorcean in Our agricultural sector. The Zimbabwe is scarcely classified in the pillar of the overall infrastructures of the Global Competitiveness Report of the World Economic Forum (GCR). The Government, he said, was pursuing both the national alternative funding and external for the main Zim activities programs Like infrastructure development. The speech mainly focused on the economy which said that it has recorded modest growth due to the negative impact of the sorcery on the agricultural sector, given that Zimbabwe is an agro-abassed economy. To obtain These two objectives achieved, the country requires consistency e della policy, established, established.
